

KYOcapture TECHNICAL SPECIFICATIONS

► Kyocera Compatible MFPs:

Fully Integrated Systems:
 KM/CS-3035
 KM/CS-4035
 KM/CS-5035
 KM/CS-6030
 KM/CS-8030
 Other Kyocera MFPs can be connected using Poll Directory or SMTP Capture component

► Standard KYOcapture Components:

One Kyocera MFP capture component, SMTP capture (one device), Basic OCR (ABBYY FineReader), Notification, send to folders, send to FTP, send to printer, send to MS SharePoint Portal Server, send to MS Exchange Folder, send to Lotus Notes, send to LAN Fax server, Multi-router, send to content management queue, XML Knowledge package loader/builder, send to PC (5 clients), PaperPort Client (5 clients), Auto capture (5 clients).

► Kyocera MFP Component

File Format: TIFF, PDF
 Resolution: 200, 300, 400, 600 DPI
 Scanning Mode: Text, photo
 Custom keys and menus at device panel
 Bidirectional look-up

► Optional Components

Poll Directory (device license is required), POP3 E-mail, Batch Importer, Desktop Productivity Package (per client license), VB/JavaScript (process/route), Image Management, Professional Barcode, PDF 417 Barcode, OmniPage OCR/Zone OCR, ABBYY FormReader, Send to Database, Application Xtender, Documentum, iManage, Hummingbird, Domino.doc, IXOS, OpenText, etc.

► KYOcapture Licensing

Standard package includes one server and one device license. Additional device license is sold per device.

Software Updates

Web updates are available with optional KYOcapture annual software maintenance agreement.

Supported Platforms

Windows® 2000 Server, Windows® 2003 Server

Minimum Hardware Requirements*

Intel® Pentium® PC, Pentium 3 or greater, 650MHz or greater, minimum of 500MB RAM, minimum of 500MB free hard disk space to load base application. System Requirements are dynamic and will change based on the workflow and component selection.

*Recommended hardware Requirements - Intel® Pentium® 4 Processor, 1.0 - 2.0GB of total memory for all processing filters and number of pages to be processed per server, 80-120GB of free hard disk space.

KYOcapture Authentication Server Technical Specifications

Kyocera Compatible MFPs: KM/CS-3035, KM/CS-4035, KM/CS-5035, KM/CS-6030, KM/CS-8030

Authentication: Novell, Active Directory, NTLM

KYOcapture Licensing: Device License

Minimum Hardware Requirements:

Intel® Pentium®-based PC, Pentium 3 or greater, 650MHz or greater, minimum of 500MB RAM, minimum of 500 MB free hard disk space

KYOcapture ABMSync Technical Specifications

Kyocera Compatible MFPs: KM/CS-3035, KM/CS-4035, KM/CS-5035, KM/CS-6030, KM/CS-8030
 (KYOcapture core system is required)

Supporting Messaging: Lotus Notes, MS Exchange 6.x above

Licensing: Device License

Serious Business. Seamless Solutions.

Document Solutions

KYOcapture — Powered by AutoStore

KYOcapture transforms the document workflow process by allowing select Kyocera multifunctional products (MFPs) to capture, process, and route paper or electronic-based documents to existing or new document management systems. With KYOCapture, end-users can boost productivity, lower their total cost of ownership, and manage their workflow effectively and accurately.

- Document Management Systems
- Databases
- Printers
- LAN Fax Servers
- E-mail
- Network Folders

- PROCESS AUTOMATION**
KYOcapture enables businesses to automate the document process at the workgroup level throughout the enterprise, using enabled Kyocera MFPs.
- ▶ Easy-to-use custom keys and indexing at the device panel
 - ▶ Drag and drop workflow design
 - ▶ Advanced and versatile document capture, process, and routing options

The Kyocera Advantage — Streamline Your Workflow

Capture and Route Directly from Your MFP

- KYOCapture offers a unique advantage over other competitive software products, by enabling easy to use, direct indexing capability at the MFP. This indexing function helps to improve efficiency, as well as eliminate user error and confusion, which can commonly occur when manually indexing documents from a computer.

Increase Productivity and Eliminate Mistakes with Bi-Directional Look-Up

- KYOCapture offers a unique Bi-Directional Look-Up capability which allows users to validate indexed information with the company's database before being processed or routed, eliminating costly mistakes. It also allows automatic input to the indexing field from a phone or client list for faster document distribution.

Secure Your Workflow with Network Authentication

- For optimal workflow security, the Network Authentication option ensures that only authorized users have access to the document input and workflow process. This valuable feature allows companies to meet Sarbanes-Oxley, HIPPA, and other important regulatory compliance requirements.

Consolidate Address Books with ABMSync

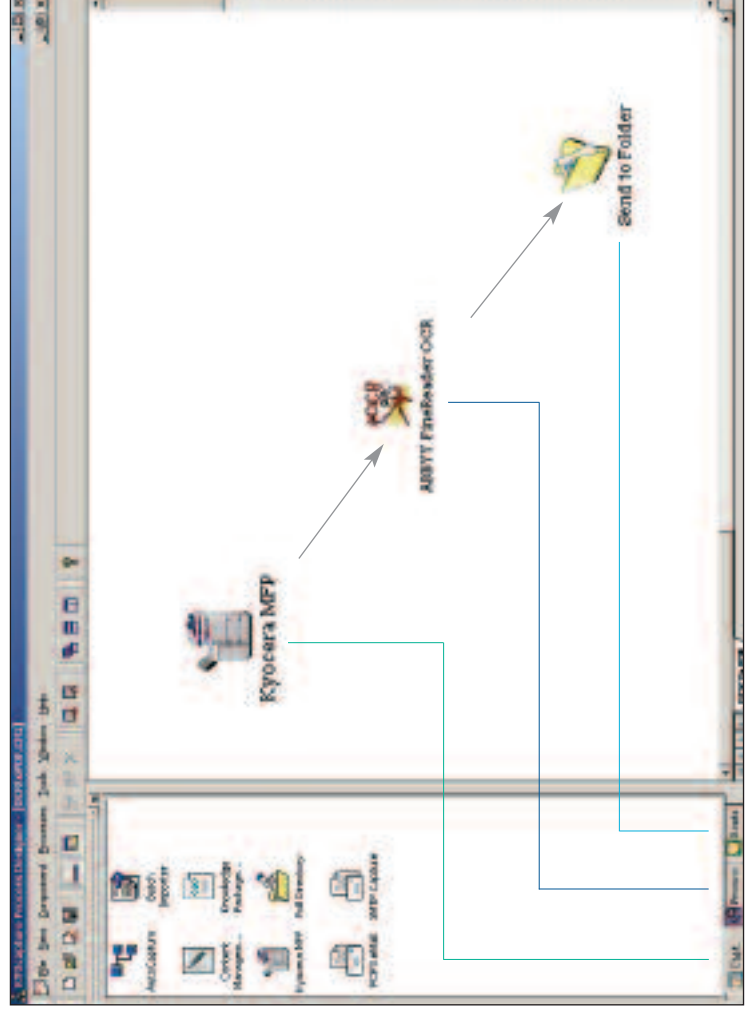

- Many businesses use multiple address books throughout the enterprise, sometimes in remote locations. With KYOCapture's ABMSync option, local or remote address books can be optimally managed by synchronizing Lotus Notes or Microsoft (MS) Exchange user profiles, and propagate changes across the network to one or more devices.

Add Simplicity to Your Workflow with Device Manager

- The KYOCapture Device Manager allows IT Administrators to oversee and manage the workflow from a central location. LDAP settings, device configurations, and workflow can be created and managed centrally for all KYOCapture enabled devices.

The KYOCapture Process

THE KYOCapture PROCESS – KYOCapture is an intelligent document capture workflow solution, which can be utilized with virtually any content management application, and optimizes the three main components in the workflow process – **CAPTURE, PROCESS, AND ROUTE**:

CAPTURE

Decentralize for improved productivity – integrating the workflow process directly into the control panel of select Kyocera MFP devices. All content can be managed more efficiently, since information from multiple sources can be captured, such as faxes, e-mail's, as well as scanned documents.

- HARDCOPY DOCUMENTS:** Scan thru MFPs • Digital Copiers • Desktop Scanners
ELECTRONIC DOCUMENTS: Desktop Network Folders • eMAIL (POP3, SMTP) • XML(ERP)
OUTPUT CAPTURE: PCL • PS

PROCESS

Automatically convert text using optical character recognition (OCR) to simplify the process of searching archived documents. Convert documents to popular file formats such as PDF and XML, for improved flexibility.

- FILTER PROCESSES:** OCR • Zone OCR • Form Processing & Recognition (ABBY) • Image Management • Despeckle • Barcode Recognition • Watermark • Document Conversion into various file formats • Document Security • VB Script API, etc.

ROUTE

Route documents to existing document management systems, such as Documentum, Interwoven, Microsoft Sharepoint Portal, and others. KYOCapture is seamlessly integrated with the following systems:

- DOCUMENT MANAGEMENT:** Microsoft SharePoint Portal Server • Documentum • Interwoven • Laserfiche • Tower Software • Hummingbird • Open Text • Domino Doc • Hyland, etc.
COLLABORATION: Microsoft Exchange • Lotus Notes/Domino
ENTERPRISE CONNECTIVITY: Microsoft BizTalk Server
DATABASE MANAGEMENT: Microsoft SQL • Access • Foxpro • Oracle • DB2 Informix
LAN FAX SERVERS: RightFAX • FaxPress • FAGSys, etc.

USER BENEFITS

- Decentralized capture of documents using Kyocera MFP devices
- Ease of implementation
- One-touch capabilities
- Limited training required
- Simple and uniform interface across all devices

ADMINISTRATOR BENEFITS

- 'Plug-and-play' components for flexible workflow design
- Centralized management from all KYOCapture enabled Kyocera MFPs
- Centralized index data and workflow configuration
- Consolidation of document capture devices for improved efficiency

Kyocera — Advanced Technology That Simplifies Business Life

KYOCERA MITA AMERICA, INC. is one of the world's largest providers of computer-connectable peripherals, including network-ready digital copiers/printers, laser printers, color copiers/printers, digital laser facsimiles, multifunctional products, wide format imaging devices, and software/network solutions.

Kyocera MFPs are recognized for their excellence in quality and productivity, as well as their low Total Cost of Ownership (TCO). Staying on the cutting edge of responsive business technology makes Kyocera uniquely qualified to develop and implement software solutions to address the mission-critical demands of today's enterprises. As part of our KYOSolutions software family, KYOCapture sets the standard for exceptional automated document capture.
